## RESEARCH INTERESTS/EXPERIENCE

- 2020 - **Learning to blindly follow hydrodynamic trails**, supervised by *Prof. Eva Kanso*  
joint with *Sina Heydari, Yusheng Jiao*  
Employ reinforcement learning to follow vortical wakes based on local flow sensory  
Find the importance of the wake's periodicity and traveling wave characteristic in source seeking  
Analyze the controller in a simplified signal field and prove that stability of the controller depends on the location of sensor  
Compare performance among different sensory cues, especially between mechano- and chemo- sensing
- 2020 - **Flexion in fish swimming**, supervised by *Prof. Eva Kanso, Prof. John H. Costello*  
joint with *Sina Heydari*  
Analyze the role of active and passive flexion on swimming speed and efficiency of a self-propelling pitching plate using vortex sheet method  
Parametric study on effects of flexion phase, flexion angle and flexion ratio on swimming performance  
Find overlap between biological data and the region we proposed to have hydrodynamic benefits in parameter space
